- Further formatting of website

Task Assignments:

Task Description	Assigned to
Facebook implementation	Alex
Website formatting	Gage
Assist with Facebook API	Jacob
Begin search filtering	John

Minutes from Previous Meeting

The Youtube and eBay APIs are nearing full integration with the website application. There are still roadblocks being encountered with the implementation of Facebook. The frontend for the application is in a good place, just needs some refinement. Some holds are in place until we have the APIs fully integrated as data from these other sites are needed for the full development of the frontend application.
